Google LLC — Software Engineer (SWE)

Role Category: SDE · Product Engineering

Bengaluru, India (Hybrid) · Full-Time · ₹32,00,000 CTC Joining bonus, annual performance bonus, stock grants (RSUs)

Role Overview

Design, develop, test, and maintain large-scale distributed systems that power Google's products such as Search, Ads, Maps, and Cloud. You'll write production code, participate in design discussions, and help keep systems fast, reliable, and secure at massive scale.

Key Responsibilities

Design and implement backend services and APIs that operate reliably at Google scale

Write clean, well-tested, maintainable code and participate in code review

Take part in system design discussions for new features and infrastructure

Diagnose and resolve performance and reliability issues in production

Collaborate closely with cross-functional partners across product, design, and SRE

What We're Looking For

Strong grasp of data structures and algorithms, and the ability to reason about time and space complexity under pressure

Hands-on programming ability — you can turn a problem statement into working, efficient code quickly

Working knowledge of operating systems fundamentals (processes, threads, virtual memory) and core networking concepts (TCP/UDP, HTTP, how a web request actually travels)

Experience or coursework in object-oriented design and common design patterns, with an eye for extensible, maintainable architecture

Comfort reasoning about system design at scale — able to sketch how a large distributed system like a URL shortener or a file storage service might be built

Solid software engineering fundamentals: testing strategy, code review habits, awareness of technical debt, and basic CI/CD concepts

Clear written and verbal communication — able to explain a technical tradeoff to engineers and non-engineers alike, and to disagree productively with a teammate

Nice to Have

Prior internship experience on a large codebase; open-source contributions; exposure to distributed systems in production.

Benefits

Comprehensive health insurance, free meals, wellness programs, generous leave policy, RSUs, relocation assistance.
