Microsoft Corporation — Software Engineer

Role Category: SDE

Hyderabad, India · Full-Time · ₹28,00,000 CTC Joining bonus, annual performance bonus, stock awards (RSUs)

Role Overview

Join a team building scalable software across Microsoft products such as Azure, Microsoft 365, and Windows. You'll own features end to end, from design through production.

Key Responsibilities

Design, build, and maintain scalable, reliable software components

Participate in Agile ceremonies and design reviews with your team

Write clean, efficient code and hold a high bar in code review

Ensure reliability, security, and performance of the systems you own

Work cross-functionally with PM and design to refine requirements

What We're Looking For

Strong data structures and algorithms fundamentals — hash maps, trees, and complexity analysis, applied confidently under time pressure

Practical coding skills — pattern matching, interval problems, and writing code that performs well on large inputs

Working knowledge of operating systems (process scheduling, virtual memory, concurrency primitives) and core networking (REST APIs, timeouts, request lifecycle)

Ability to design at the system level — sketch a cloud-based storage or notification service and reason about scalability and fault tolerance

Understanding of object-oriented design and SOLID principles, and how to design software that's easy to extend

Software engineering maturity — clean code habits, a real testing strategy, and comfort talking about technical debt honestly

Strong communication — able to describe a hard problem you solved and how you collaborate across teams

Nice to Have

Exposure to cloud infrastructure (Azure or similar); contributions to a shared codebase in a team setting.

Benefits

Comprehensive health insurance, RSUs, flexible work arrangements, learning and certification budget, wellness programs.
