Ananya Rao

Systems-leaning generalist — strong fit for SWE-heavy roles, weaker fit for data roles

Education

B.Tech, Computer Science and Engineering, Class of 2026 — CGPA 8.6 / 10

Technical Skills

C++, Python, Java, Data Structures & Algorithms, Operating Systems, Computer Networks, Object-Oriented Design, Git, Linux

Projects

Built a distributed URL-shortening service with a Redis-backed cache and a horizontally-scalable API layer as a capstone systems project

Implemented a multithreaded job scheduler in C++ simulating OS-level process scheduling algorithms (Round Robin, Priority, SJF)

Designed a parking-lot management system in Java using OOP design patterns (Factory, Strategy) as a design-practice exercise

Hackathons / Internships

Finalist, national-level 24-hour hackathon — built a real-time chat backend

Summer intern, backend team at a mid-size product startup — shipped a rate-limiter used in production

Certifications

None listed

Achievements

Solved 350+ problems on competitive programming platforms; mentors juniors on DSA through the college coding club

Preferred Roles

Software Engineer, Backend Engineer
