Rohan Verma

Strong all-rounder — competitive fit across nearly every role in this pack

Education

B.Tech, Computer Science and Engineering, Class of 2026 — CGPA 9.1 / 10

Technical Skills

C++, Python, SQL, Data Structures & Algorithms, System Design, Object-Oriented Design, Operating Systems, basic Machine Learning, Git, Docker

Projects

Designed and built a scalable notification service (pub-sub architecture, horizontally-scalable workers) as a personal system-design project, documented with architecture diagrams

Built a recommendation engine using collaborative filtering on a movie-ratings dataset, evaluated with precision/recall

Wrote a technical blog series on object-oriented design patterns used in real-world systems

Hackathons / Internships

Winner, national inter-college hackathon — built a real-time collaborative document editor

Software Engineering intern at a Series-B startup — shipped a feature end-to-end including tests and CI

Certifications

Self-taught via applied projects; no formal certifications listed

Achievements

500+ problems solved across competitive programming platforms; open-source contributor (2 merged PRs to a mid-size Python library)

Preferred Roles

Software Engineer, Data Scientist, Backend Engineer
